SEPTEMBER 26, 2006
FOR IMMEDIATE RELEASE

EDC TECHNOLOGIES, INC. WINS "SMART POWER" CATEGORY IN THE 2006 CALIFORNIA CLEAN TECH OPEN.

The Technology

EDC Technology controls and monitors domestic hot water boilers in Multifamily Apartment Communities, Hotels/Motels, Dormitories and Senior Care Facilities providing 15-35% continuous natural gas savings month in month out.

We achieve continuous savings by deploying our proprietary Domestic Hot Water Controller in combination with our proprietary communications network on your facility. The results are impressive:

- Significantly reduced and SUSTAINED natural gas consumption
- Assurance that your hot water environment is operating at optimal efficiency
- Proactive identification and notification of hot water anomalies that may be occurring in your hot water environment *and*
- An ongoing log of your systems temperatures and operation

The Value

The value EDC Technology provides is MUCH more than energy savings. In fact, once savings is achieved, it's often forgotten... But that's where EDC Technologies is different.

Because we are monitoring your domestic hot water environment we are constantly reviewing your operational efficiency. When our technology identifies something out of the norm, we dispatch an e-mail to your facility indicating the potential issue, what is believed to be causing the issue and how to resolve the problem. The technology also provides an ongoing log of the temperatures and efficiency.

Who Benefits

Everyone involved with our technology benefits, including:

- **Owners & Management** ~ Improved hot water efficiency and significantly reduced utility costs
- **Maintenance Personnel** ~ We provide a proactive means for them to monitor and track the operation of their system
- **Contractors** ~ We provide a bridge between our client and his contractor, whereby both parties can see the actual hot water issue prior to dispatching personnel, resulting in reduced cost and overall improved service
- **Tenants & Guests** ~ Are assured that they are using hot water in a safe and efficient manor

Located in Sebastopol California, EDC Technologies, Inc. partners with multi-family apartment owners, property management companies and Natural Gas Utilities to bring forth energy efficiency, conservation, monitoring and overall safety to domestic hot water systems.

The California Clean Tech Open is an annual, nationwide competition created by entrepreneurs, for entrepreneurs. The goal is to accelerate the transformation of great ideas into thriving businesses that will turn California into a clean technology powerhouse and enrich the state's other industries. It is an independent non-profit organization of experienced volunteer entrepreneurs and business professionals. Please see: www.cacleantech.com.
